What is claimed is:

1. A method for controlling offers that a	e provided at a point-of-sale terminal,	comprising:
---	---	-------------

- 2 providing a plurality of offers at a point-of-sale terminal;
- 3 measuring a performance rate of each offer, thereby defining a plurality of performance
- 4 rates;
- 5 selecting a subset of offers based on at least one of the plurality of performance rates; and
- 6 providing the subset of offers at a point-of-sale terminal.
- 1 2. The method of claim 1, in which the step of providing a plurality of offers is performed
- during a first time period; and in which the step of providing the subset of offers is performed
- during a second time period which is subsequent to the first time period.
- 1 3. The method of claim 1, in which the step of providing a plurality of offers comprises:
- 2 providing an offer of the plurality of offers at each of a plurality of terminals.
- 1 4. The method of claim 1, further comprising:
- 2 measuring a performance rate of the subset; and
- if the performance rate of the subset is less than a predetermined threshold,
- 4 providing the plurality of offers after the step of providing the subset of offers.
- 1 5. The method of claim 1, in which the step of selecting a subset of offers comprises:
- 2 selecting offers that have at least a predetermined performance rate.

- The method of claim 1, in which the step of selecting a subset of offers comprises: 1 6. selecting a predetermined number of highest-performing offers. 2 An apparatus for controlling offers that are provided at a point-of-sale terminal, 1 7. 2 comprising: 3 a storage device; and 4 a processor connected to the storage device, the storage device storing a program for controlling the processor; and 5 the processor operative with the program to: 6 provide a plurality of offers at a point-of-sale terminal; 7 8 measure a performance rate of each offer, thereby defining a plurality of 9 performance rates; select a subset of offers based on at least one of the plurality of performance rates; 10 11 and provide the subset of offers at a point-of-sale terminal. 12 8. The apparatus of claim 7, in which the processor is further operative with the program to: 1 2 provide a plurality of offers during a first time period; and 3 provide the subset of offers during a second time period which is subsequent to 4 the first time period.
- 9. The apparatus of claim 7, in which the processor is further operative with the program to provide an offer of the plurality of offers at each of a plurality of terminals.

1	10.	The apparatus of claim 7, in which the processor is further operative with the program to:		
2		measure a performance rate of the subset; and		
3		if the performance rate of the subset is less than a predetermined threshold,		
4		provide the plurality of offers after a provision of the subset of offers.		
1	11.	The apparatus of claim 7, in which the processor is further operative with the program to		
2	select	offers that have at least a predetermined performance rate.		
1	12.	The method of claim 7, in which the processor is further operative with the program to		
2	select	a predetermined number of highest-performing offers.		
1	13.	A method for controlling offers that are provided at a point-of-sale terminal, comprising:		
2		providing a first offer at a point-of-sale terminal;		
3		measuring a performance rate of the first offer; and		
4		if the performance rate of the first offer is below a predetermined threshold,		
5		providing a second offer at a point-of-sale terminal.		
1	14.	An apparatus for controlling offers that are provided at a point-of-sale terminal,		
2	comp	comprising:		
3		a storage device; and		
4		a processor connected to the storage device,		
5		the storage device storing a program for controlling the processor; and		
6		the processor operative with the program to:		

7		provide a first offer at a point-of-sale terminal;	
8		measure a performance rate of the first offer; and	
9		if the performance rate of the first offer is below a predetermined threshold,	
10		provide a second offer at a point-of-sale terminal.	
1	15.	A method for controlling offers that are provided at a point-of-sale terminal, comprising:	
2		providing a first offer at a first point-of-sale terminal;	
3		providing a second offer at a second point-of-sale terminal;	
4		measuring a performance rate of the first offer;	
5		measuring a performance rate of the second offer; and	
6		if the performance rate of the second offer is less than the performance rate of the first	
7	offer,		
8		providing the first offer at the second point-of-sale terminal.	
1	16.	An apparatus for controlling offers that are provided at a point-of-sale terminal,	
2	comprising:		
3		a storage device; and	
4		a processor connected to the storage device,	
5		the storage device storing a program for controlling the processor; and	
6		the processor operative with the program to:	
7		provide a first offer at a first point-of-sale terminal;	
8		provide a second offer at a second point-of-sale terminal;	
9		measure a performance rate of the first offer	

10		measure a performance rate of the second offer; and
11		if the performance rate of the second offer is less than the performance rate of the first
12	offer,	
13		provide the first offer at the second point-of-sale terminal.
1	17.	A method for controlling offers that are provided at a point-of-sale terminal, comprising
2		for each of a plurality of purchases,
3		determining an upsell in dependence on the purchase,
4		determining an upsell price, each upsell price being based on a purchase, and
5		offering to exchange the upsell price for the upsell;
6		measuring a performance rate of each upsell, thereby defining a plurality of performance
7	rates;	
8		selecting a subset of upsells based on at least one of the plurality of performance rates;
9	and	
10		providing the subset of upsells at a point-of-sale terminal.
1	18.	An apparatus for controlling offers that are provided at a point-of-sale terminal,
2	compi	rising:
3		a storage device; and
4		a processor connected to the storage device,
5		the storage device storing a program for controlling the processor; and
6		the processor operative with the program to, for each of a plurality of purchases:
7		determine an upsell in dependence on the purchase,

O.		determine an upsell price, each upsell price being based on a purchase, and
9		offer to exchange the upsell price for the upsell;
10		measure a performance rate of each upsell, thereby defining a plurality of
11	performance i	rates;
12		select a subset of upsells based on at least one of the plurality of performance
13	rates; and	
14		provide the subset of upsells at a point-of-sale terminal.
15
